

An authority in steam generation, B&W's excellence is marked by its water-tube boilers, steam generation systems, wet and dry cooling systems, and renewable energy systems.

Self Cleaning Industrial Water Filters. Provides simple, reliable, self-cleaning operations for protection of Plant cooling systems from low quality intake water.

A brand of Celeros Flow Technology. Supplier of general service & severe duty control valves, turbine bypass valves and desuperheaters for the power, process and nuclear industries.

Since 1976, Evapco specializes in heat transfer solutions with an emphasis on cooling products for various industry applications, highlighted by its innovative Air Cooled Condensers.

A combustion leader in emissions and air quality initiatives. Over 1100 patents with projects in 50 countries, like low NOx burners, gas recovery, vapor control, and thermal oxidizers.

Started in Germany in 1871, KSB is a long-standing and highly-respected manufacturer of chemical and boiler feed pumps and valves for various applications in over 100 countries.

An international leader in developing industrial dehumidification and climate control products that regulate indoor humidity, temperature, and energy efficiency.

Designed to work in extreme pressure and temperature conditions, this single channel heat exchanger is an excellent solution for high fouling applications and biphasic process conditions.

With a company history that spans over 100 years, Piller prides itself on creating high-performance and energy-efficient industrial blower and compressor products.

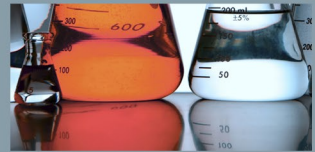

The world's leading independent supplier of natural circulation heat recovery steam generators behind gas turbines, including HRSGs for combined cycle power.

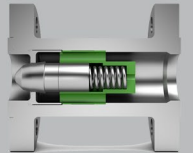

Omega Thermo Products is all about Laser Welded Plates, from tank walls, bottoms, cooling panels to complete customizable heat exchangers consisting of Laser Plates.

With over 20 years of focus on service and product quality, Paratherm provides heat transfer fluid solutions to industries such as chemical and gas processing, biodiesel, and plastics.

A German-based company that produces valves and fittings that protect fluid pumps. Schroeder has designed its well-received products for renewable energy, chemical, refinery industries.

A thermal fluid heating systems specialist geared towards gas and crude oil processing, agriculture, asphalt, petrochemical, power generation, aerospace, mining, pulp and paper, and wastewater.

Inproheat's submerged combustion technology is ideally-suited to heating challenging liquids and slurries with ultra-high thermal efficiencies, or as an evaporator.

Heat transfer products highlighted by its Added Steel Ring™ Screw Plug heat exchangers. TEMA also designs static equipment, including pressure vessels, specialty columns and tubular reactors.

Tranter boasts almost 90 years of manufacturing custom-built heat exchangers the chemical and hydrocarbon processing, renewable energy, refrigeration, power generation, marine, and oil and gas sectors.

A specialist in heavy-duty size reduction for 150 years, Williams Patent Crusher offers efficient shredders, crushers, grinders, and pulverizers that are customized for their intended applications.
